

1- Clique com o botão direito do mouse no Menu iniciar e selecione “Gerenciador de Dispositivos

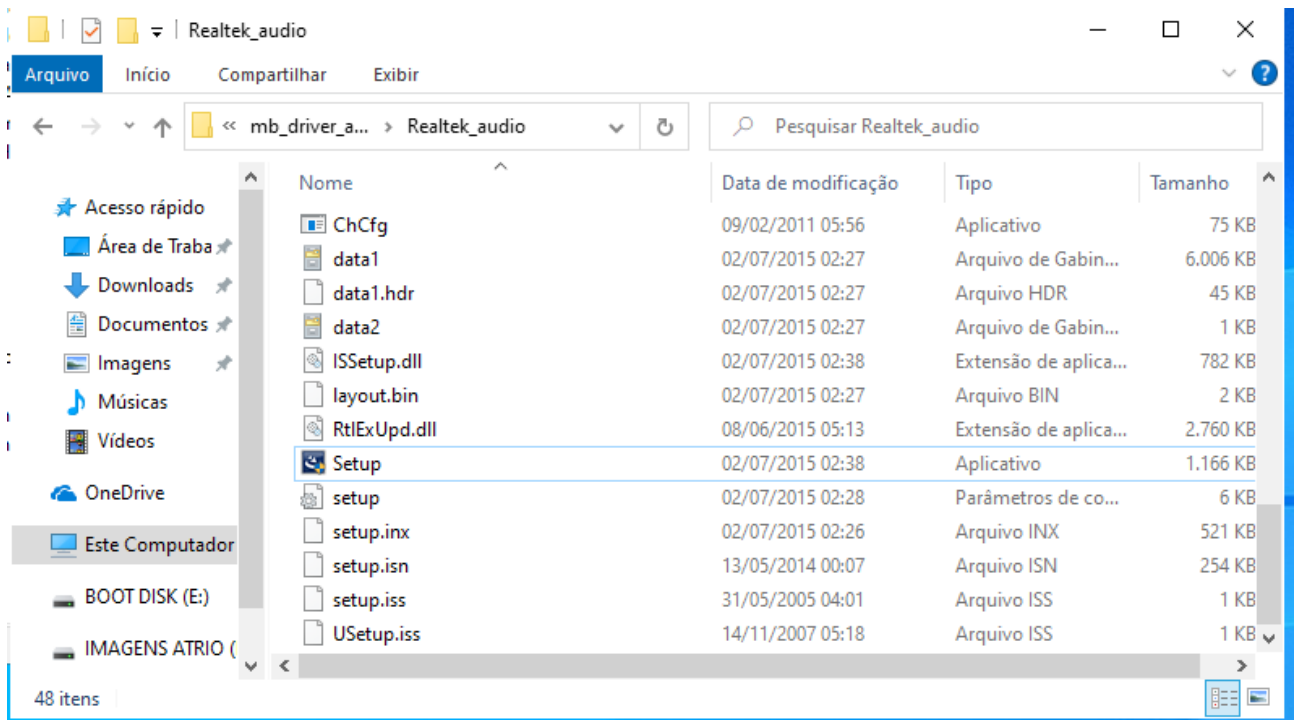

2- Selecione “Controladores de som, vídeo e jogos” e com o botão direito do mouse selecione “Dispositivo de High Definition Audio” e em seguida “Desinstalar dispositivo”.

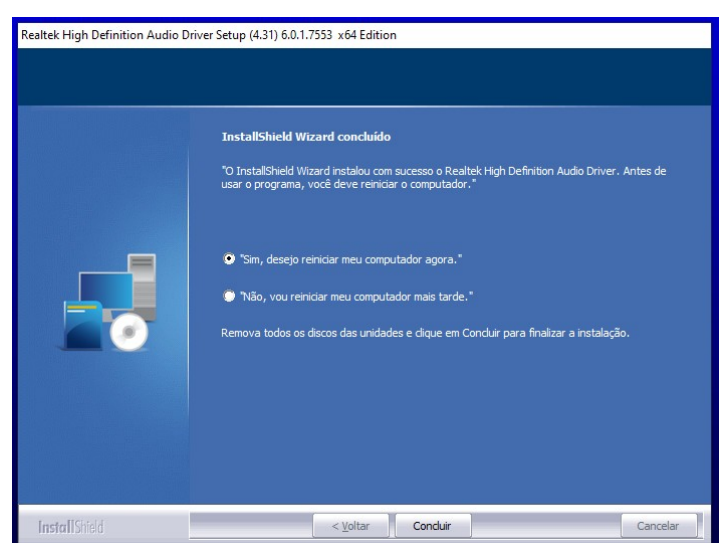

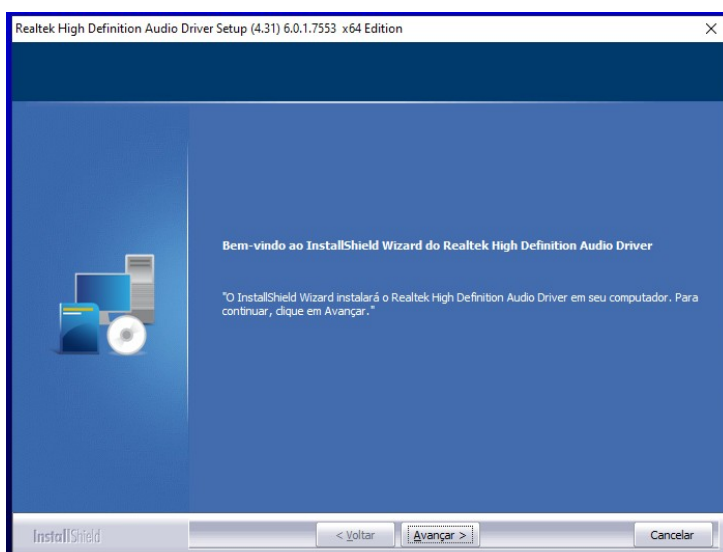

3- Confirme clicando em “Desinstalar”.

4- Abra a pasta “Realtek\_audio” e execute o arquivo “Setup.exe”.

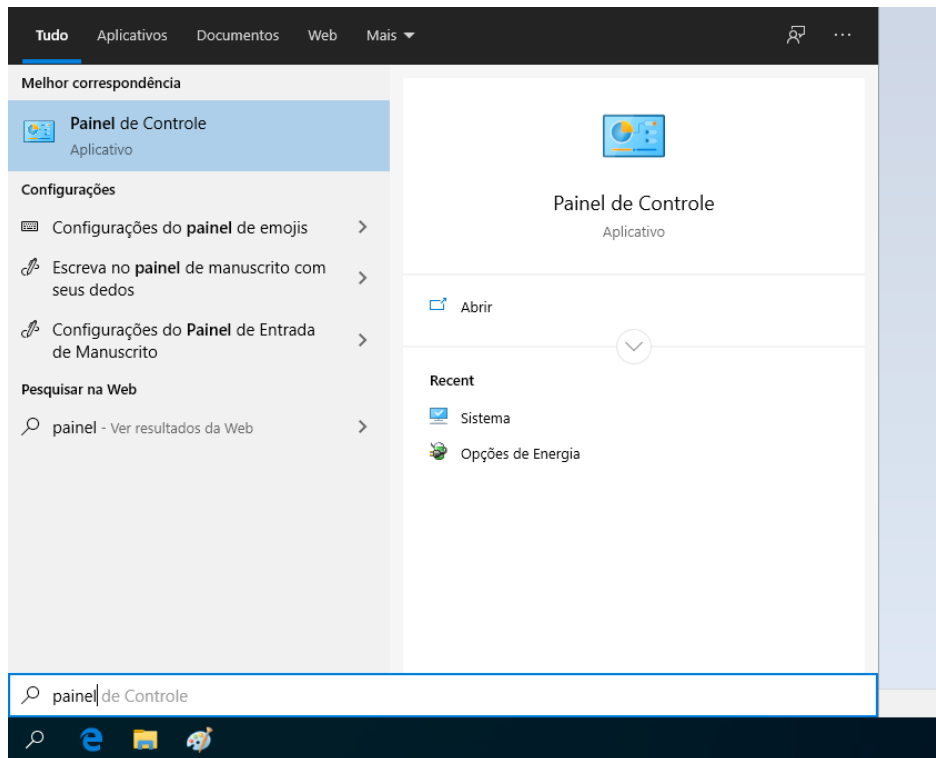

5- Instale o programa clicando em “Avançar” e reinicie o computador quando solicitado.

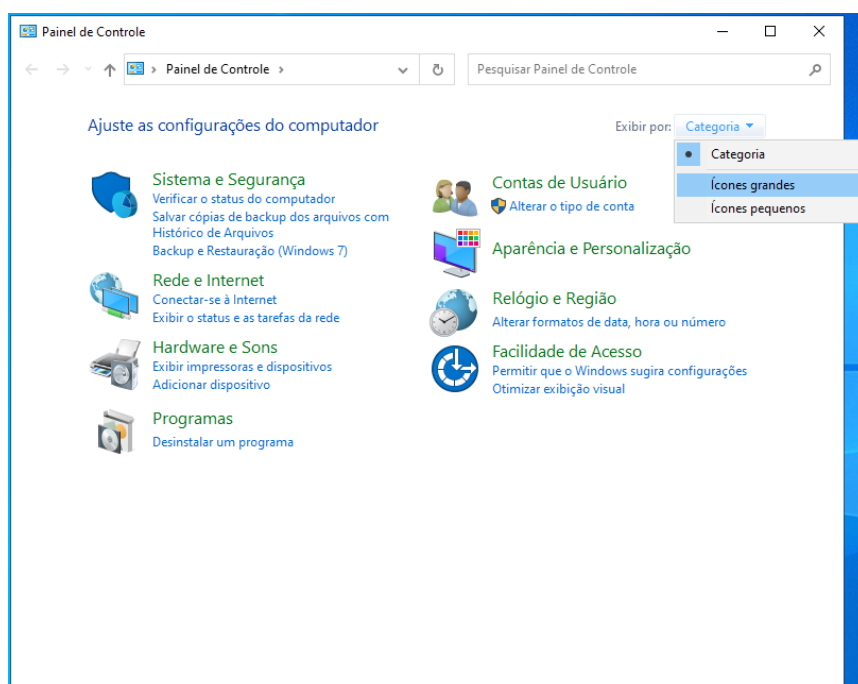

6- Verifique se apareceu o ícone de um *speaker* na área próxima ao relógio. Caso tenha, pule para o passo 10.

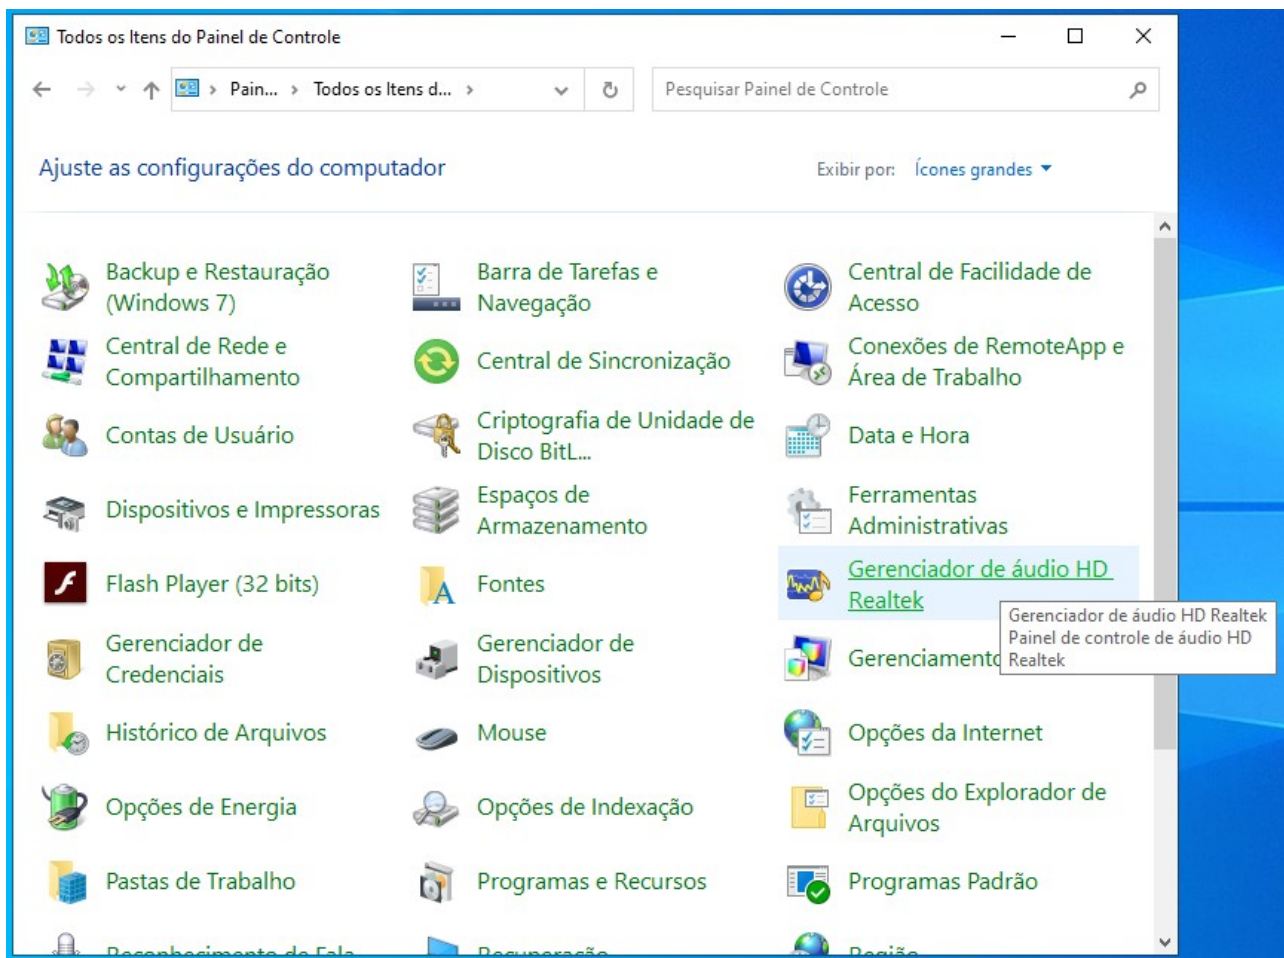

7- Abra o “Menu Iniciar” e digite “painel de controle”.

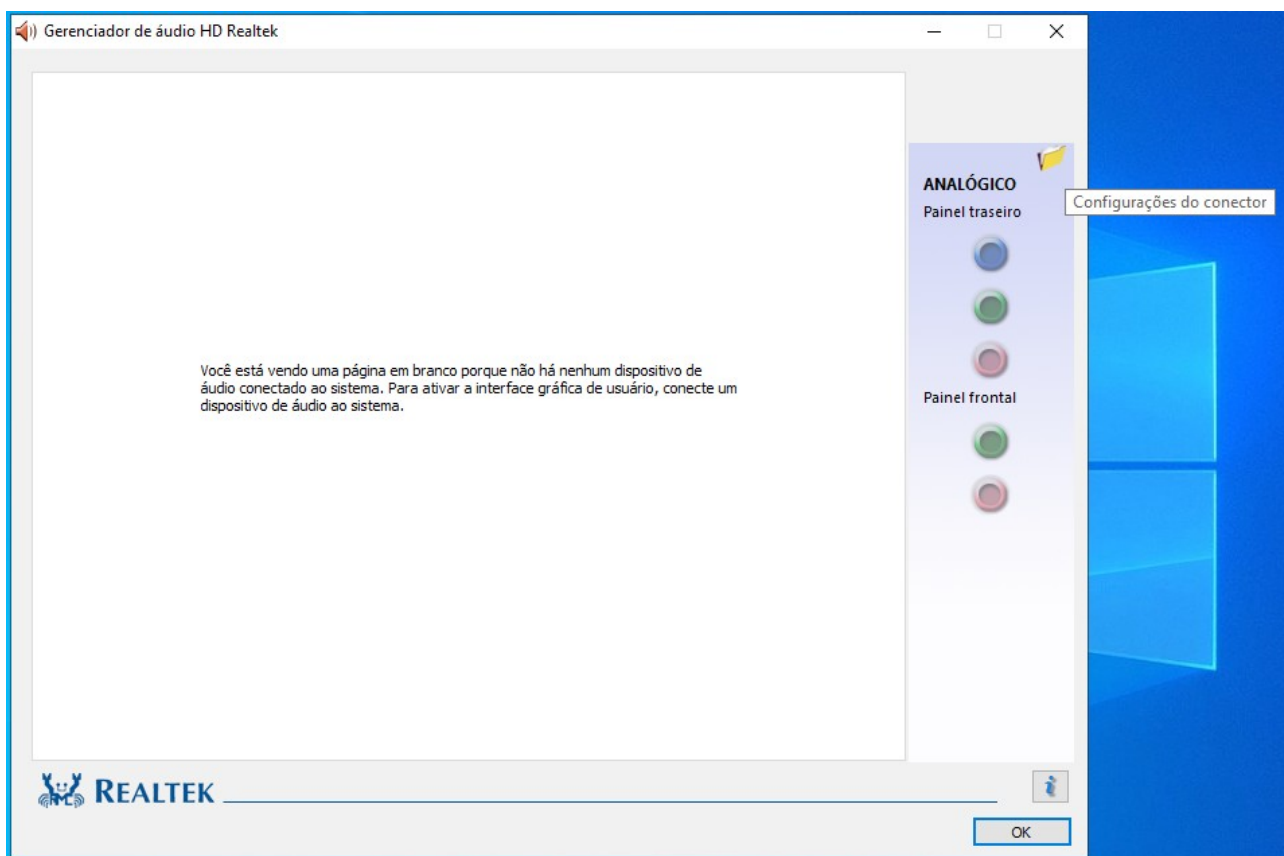

8- Altere “Exibir por:” de “Categoria” para “Ícones grandes”.

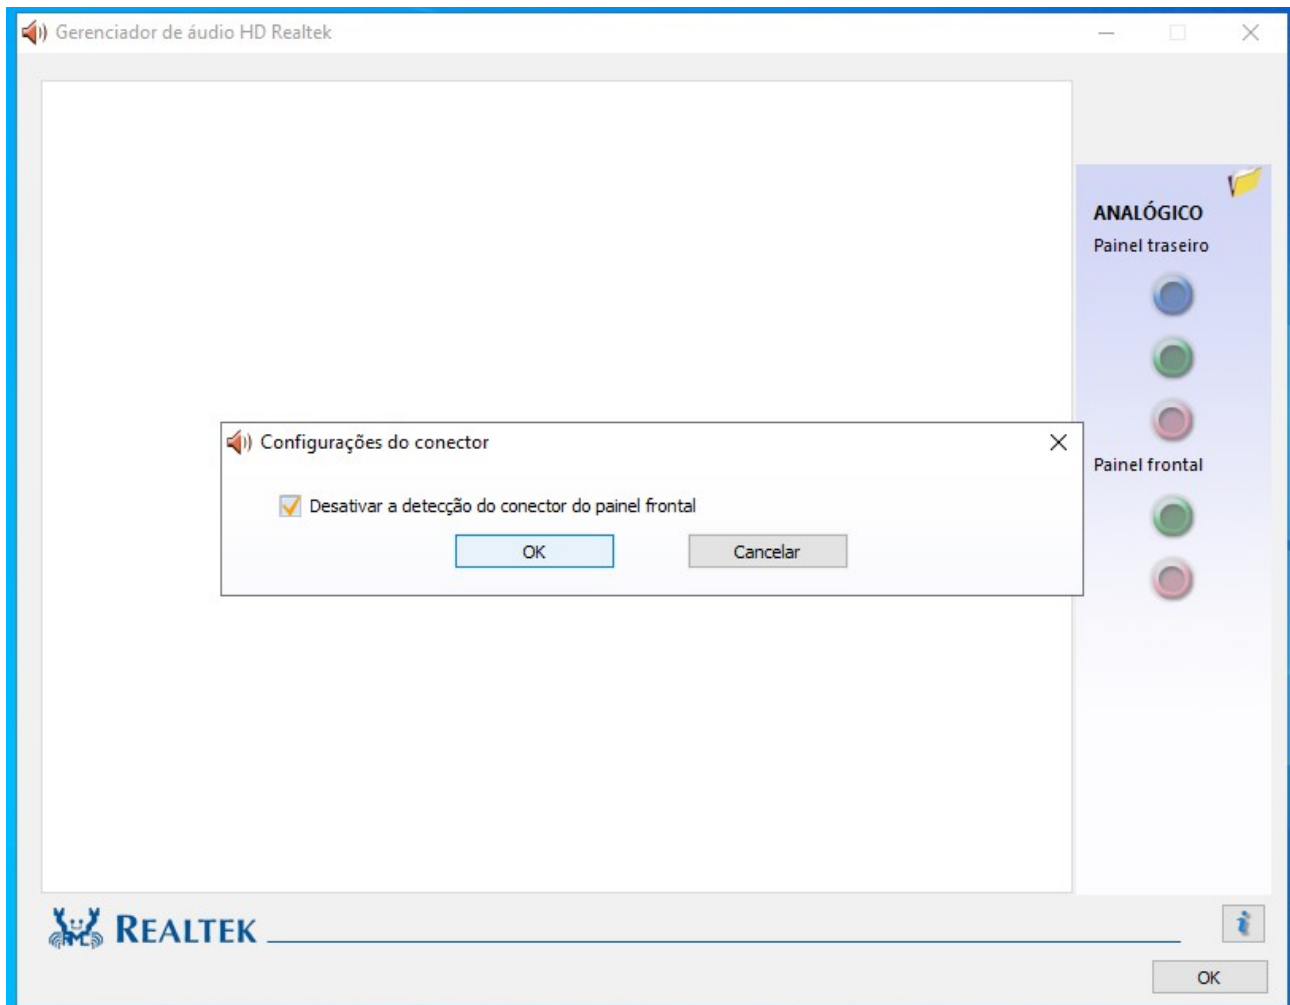

9- Abra o “Gerenciador de áudio HD Realtek”.

10- Clique na pasta no canto superior direito para acessar as “Configurações do conector”.

11- Marque a caixa de seleção para “Desativar a detecção do conector do painel frontal.

Pronto, o áudio frontal já está funcionando.
