ZE

SUPERTUNER CASSETTE CAR STEREO WITH FM STEREO

SERVICE MANUAL

SUGGESTED

\$14.00

SPECIFICATIONS

Semi-Conductors	AF: 4 IC's, 4 transistors, 7 diodes	Radio Section	Frequency Range	88~108 MHz
	RF: 4 IC's, 1 FET, 6 transistors, 5 diodes		Usable Sensitivity	10dBf (0.9μV/75Ω)
Controls	Volume, balance, bass, treble, eject, fast forward, rewind, tuning, local/ distant, radio, loudness, muting		50dB Quieting Sensitivity	10dBf (0.9μV/75Ω)
Power Source	DC 13.8V (11~16V allowable)		Signal to Noise Ratio	68dB
Grounding	Negative ground system		Capture Ratio	1.7dB
Cartridge	PHILIPS-type cassette (C-30, C-60)		Selectivity	73dB (+400 kHz), 75dB (-400 kHz)
Wow and Flutter	Less than 0.3% (WRMS)		Image Rejection	61dB
Rewind Time	Approx. 100 sec (C-60)		IF Rejection	80dB
Fast Forward Time	Approx. 100 sec (C-60)		Distortion	0.8%
Power Output	Rated (RMS): 8W		Frequency Response	30 ~ 12,000 Hz (-3 dB)
Frequency Response	40~10,000 Hz		Muting Level	5dB
Tone Control	Bass: ±10dB (100 Hz) Treble: ±10dB (10 kHz) +9dB (100 Hz), +4dB (10 kHz)		Distant Switch Effect	25dB Attenuation ON/OFF
Loudness Contour (Volume: -30dB)			Stereo Separation	32dB
Cross Talk	More than 45dB		Dimensions (W x H x D)	192 x 75 x 190 mm (7-5/8 x 3 x 7-1/2 in.)
Signal to Noise Ratio	More than 50dB		Weight	2.3 kg (5 lbs)
Load Impedance	4Ω (2~8Ω allowable)

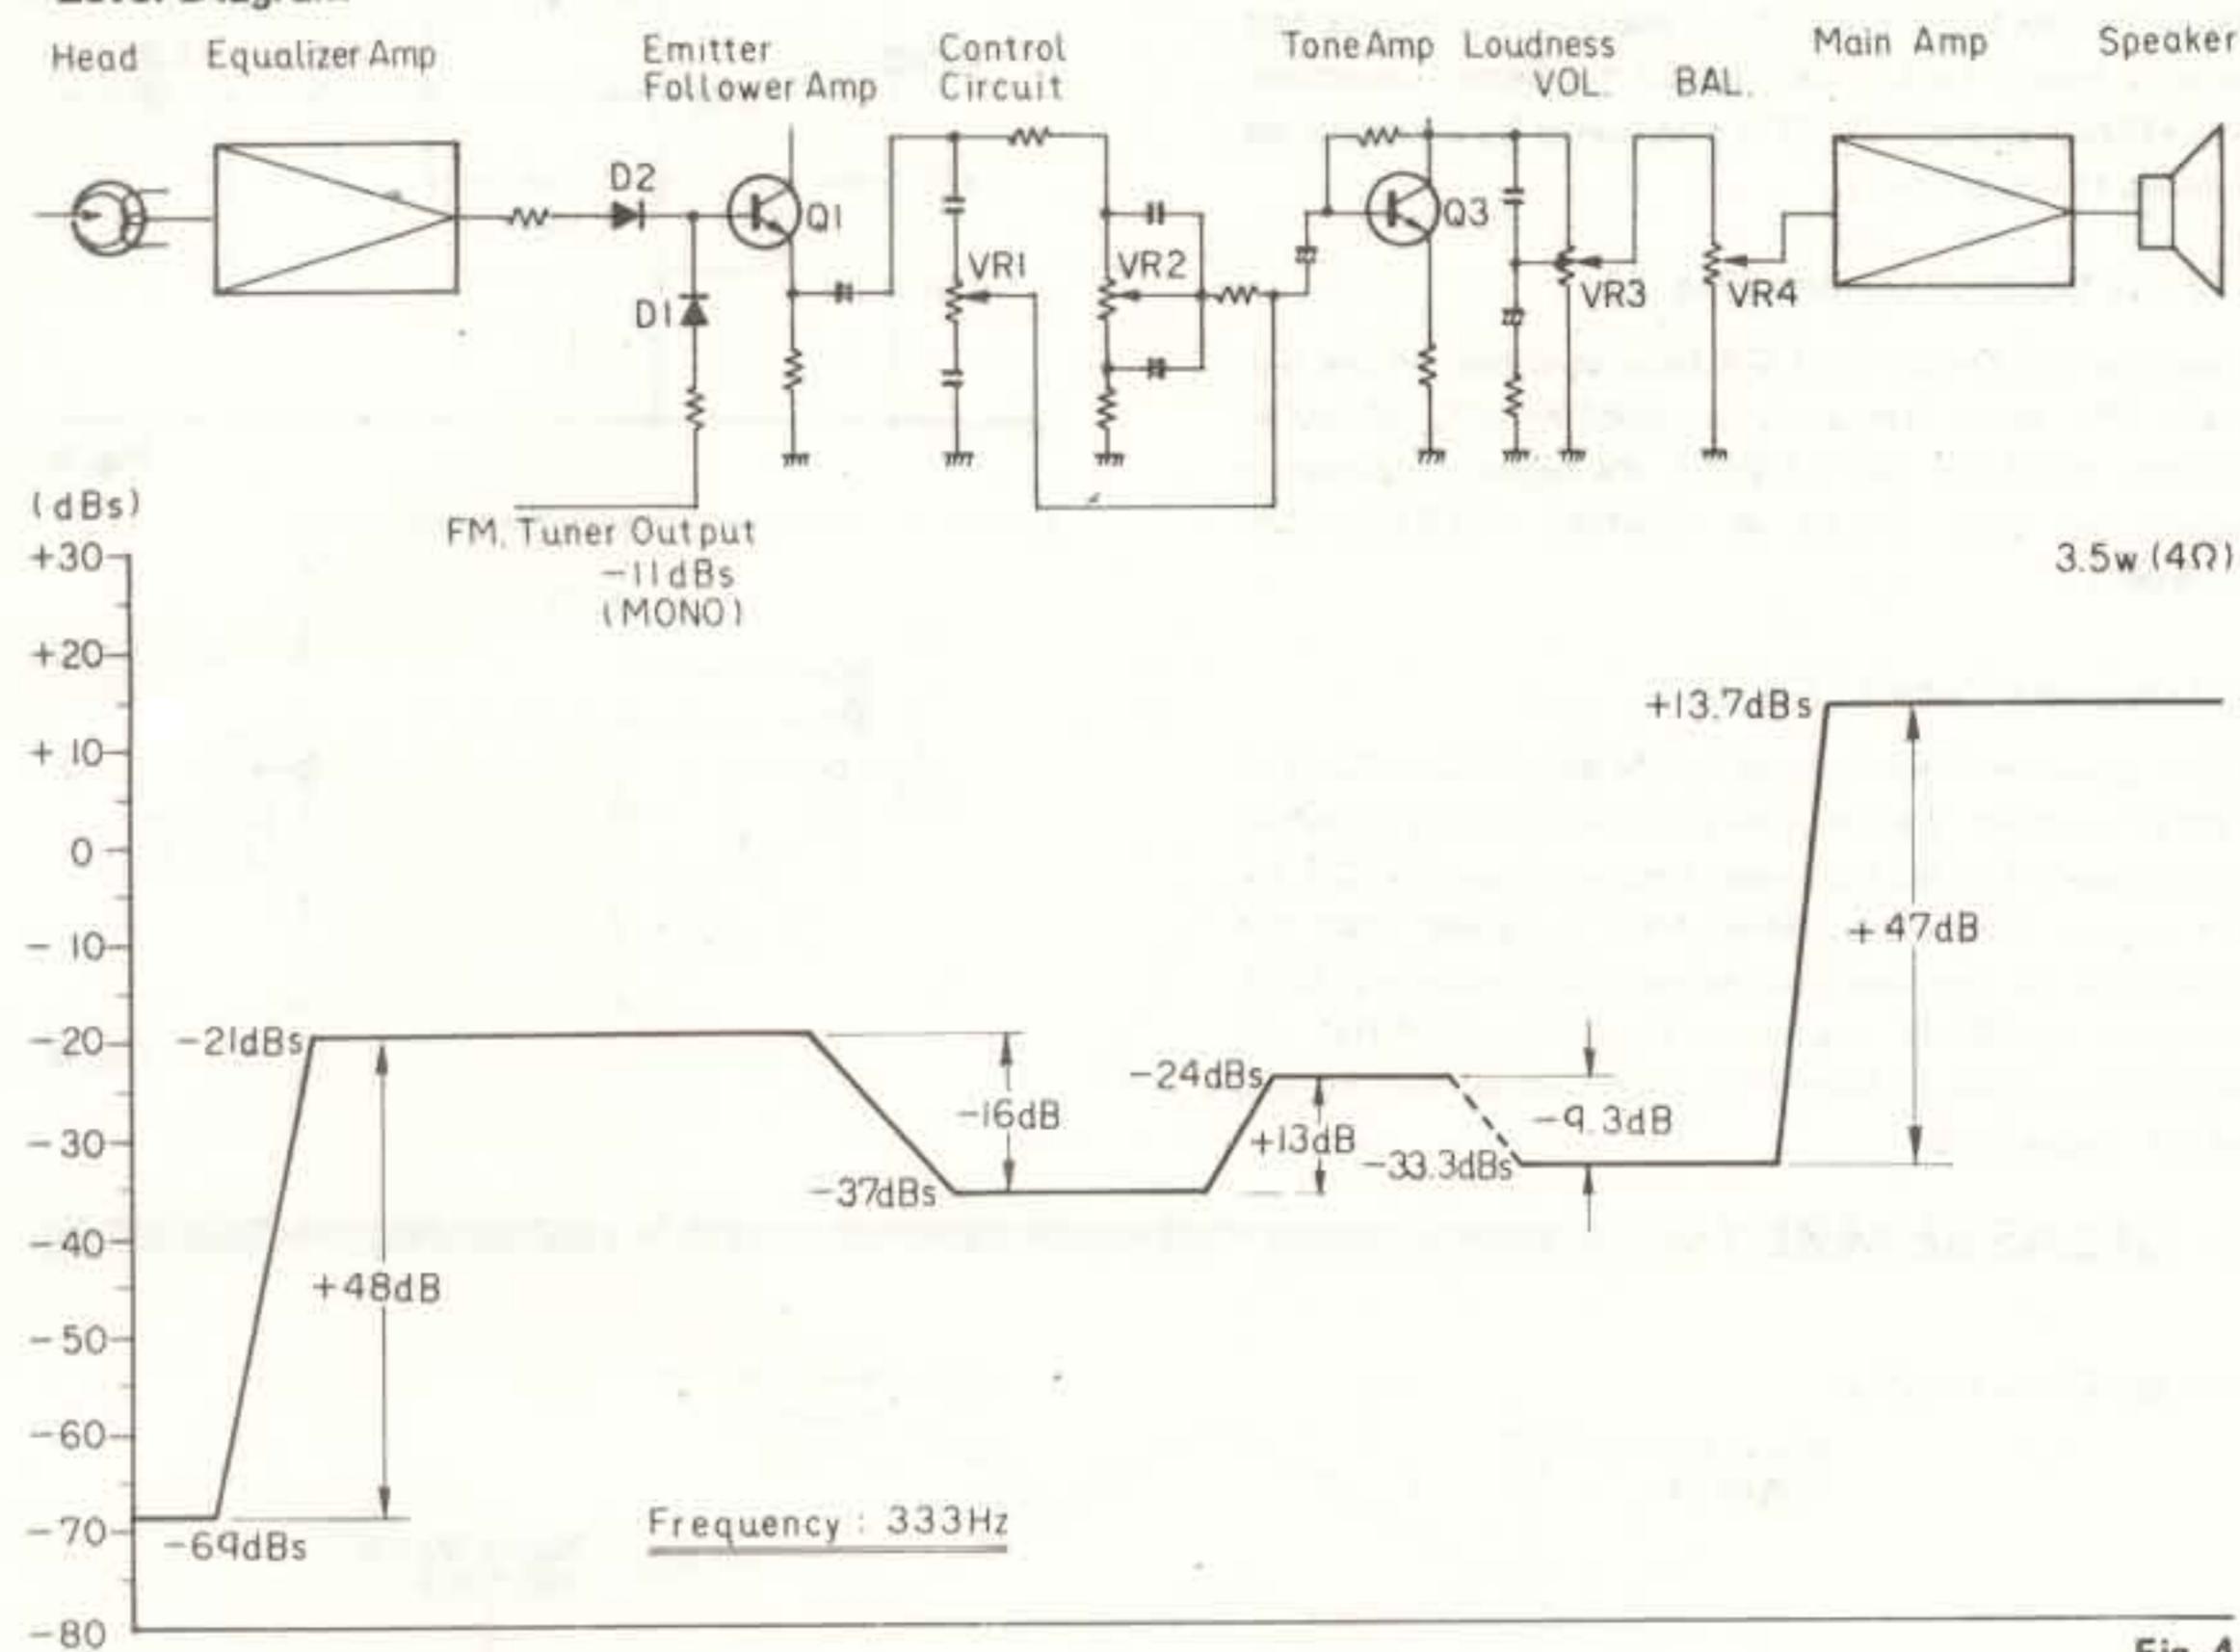

Fig. 4

• IF/MPX Circuit

IC (H8D1177) which utilizes two ceramic filters is employed for the input to IF amplifier. Another ceramic filter is employed behind the IC. Owing to these three ceramic filters, the selectivity of two signals has been improved.

The output from IF amplifier is added to the quadrature IC (HA1137) and is detected. This IC, which is to be used at 13V, directly adds +B without passing through the stabilizing power source.

The detection output is added to the second terminal of MPX IC (KB4409) and when pilot signal is received at MPX IC, the signal is separated by PLL operation of MPX, and the stereo lamp will light up. The separated signal is added to the active filter via the fourth and fifth terminals. De-emphasis is determined by R20, 21, C27, 28 which are connected to the fourth and fifth terminals. The active filter can obtain 8dB gain, thus reducing

the frequency characteristic of 15 kHz by -3 dB. MONO/STEREO automatic switch-over circuit and muting circuit are located between the detection circuit and MPX. When listening a broadcast in the weak electric field where large ignition noise is heard, the auto-circuit (Q2, 3 auto-level regulating semi-fixed VR1) is activated to switch over to MONO. At the same time, the frequency characteristic of higher register is reduced by C16 and R13, and the noise is minimized. The reduced amount is 10 kHz approx. 13 dB. And de-emphasis frequency characteristic is -28 dB in the weak electric field, and -15 dB in the medium strong electric field. When the electric field becomes weak, set the muting switch to ON, and the muting circuit of IC2 is activated to erase the unpleasant noise (inter-station noise) at the non-broadcasting part of the dial.

CIRCUIT DESCRIPTION

• LOCAL/DX Switch

When the input signal level from the antenna is weak and noise is heard, switch over to DX for better reception. At LOCAL, approx. 25 dB is attenuated by a resistor set in series to the antenna.

• Tone Control Circuit (Fig. 5)

Tone control circuit is of CR type as shown in the diagram. The lower frequency is varied by VR2 (Boost at 100 Hz: +10.5 dB, Cut: -9.5 dB), the higher frequency is varied by VR1 (Boost at 10 kHz: +10.5 dB, Cut: -9.5 dB).

• Loudness Circuit (Fig. 6)

When Loudness Switch is set to ON and Volume Control (VR3) is varied, the frequency characteristic is modified by C33 and R33 for the lower frequency and by C31 for the higher frequency. When VR3 is varied from the maximum to the position where the frequency is attenuated by 30 dB, the lower frequency (100 Hz) and higher frequency (10 kHz) are modified by +10 dB and +4 dB, respectively.

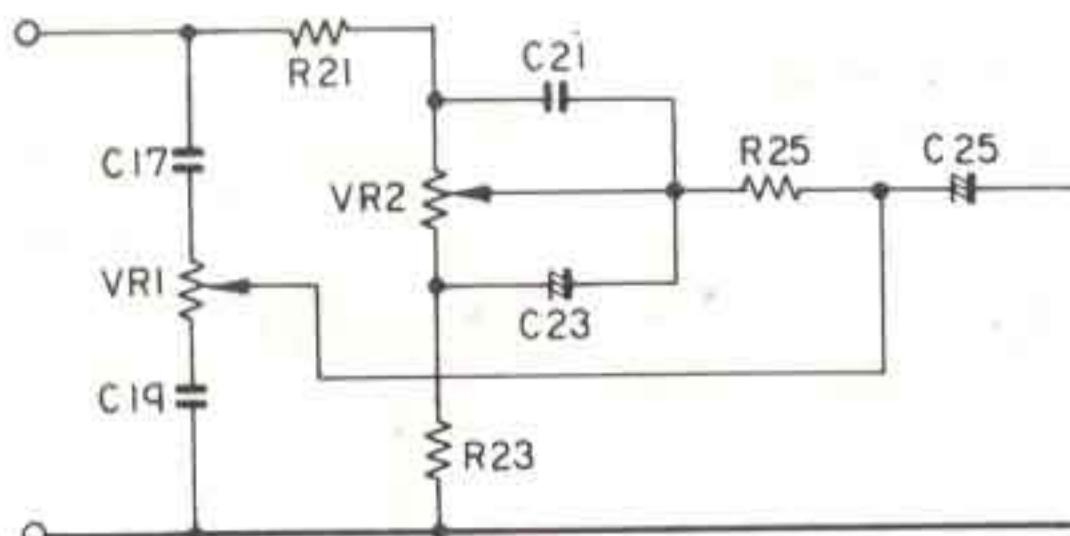

Fig. 5

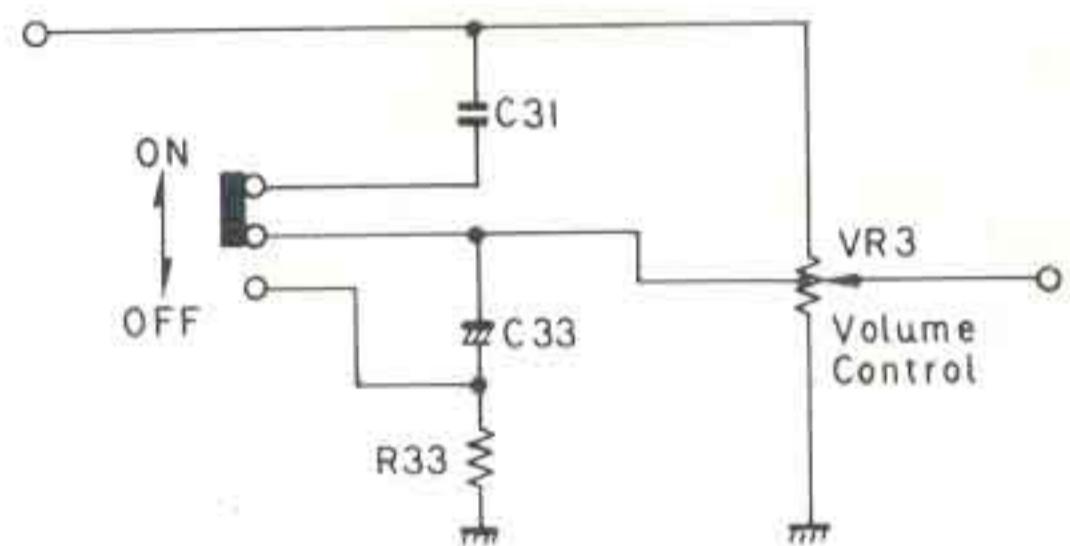

Fig. 6

3. DISASSEMBLY

• Case Disassembly

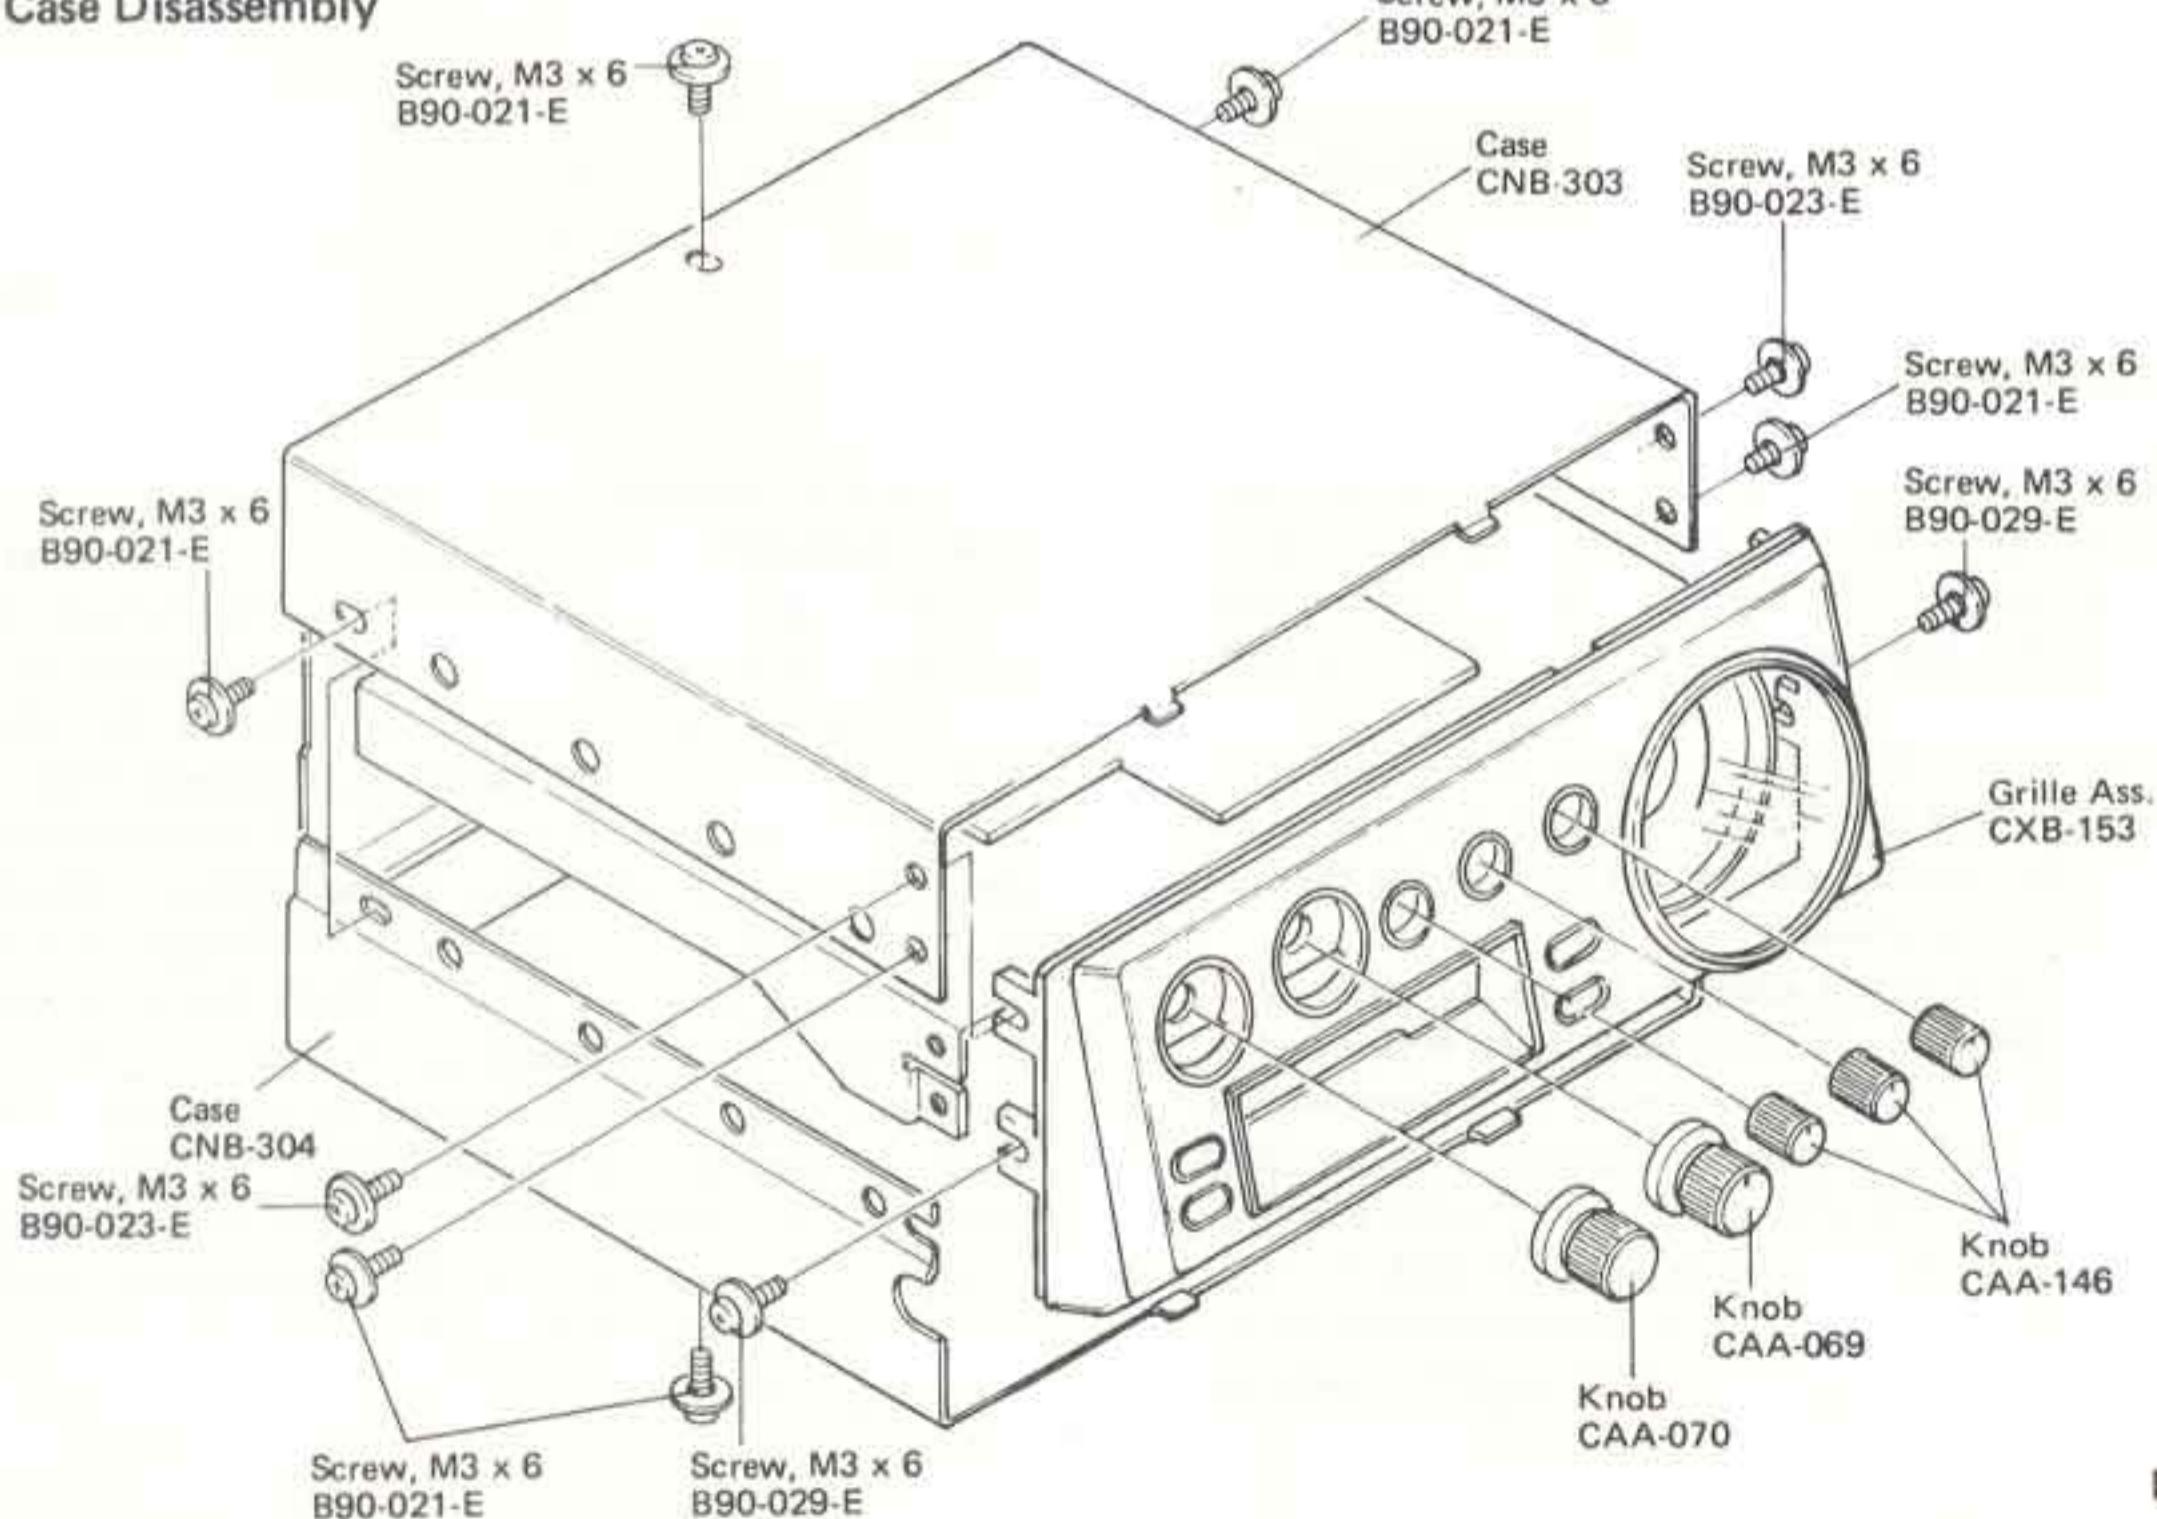

Fig. 7

- Cassette Mechanism Disassembly

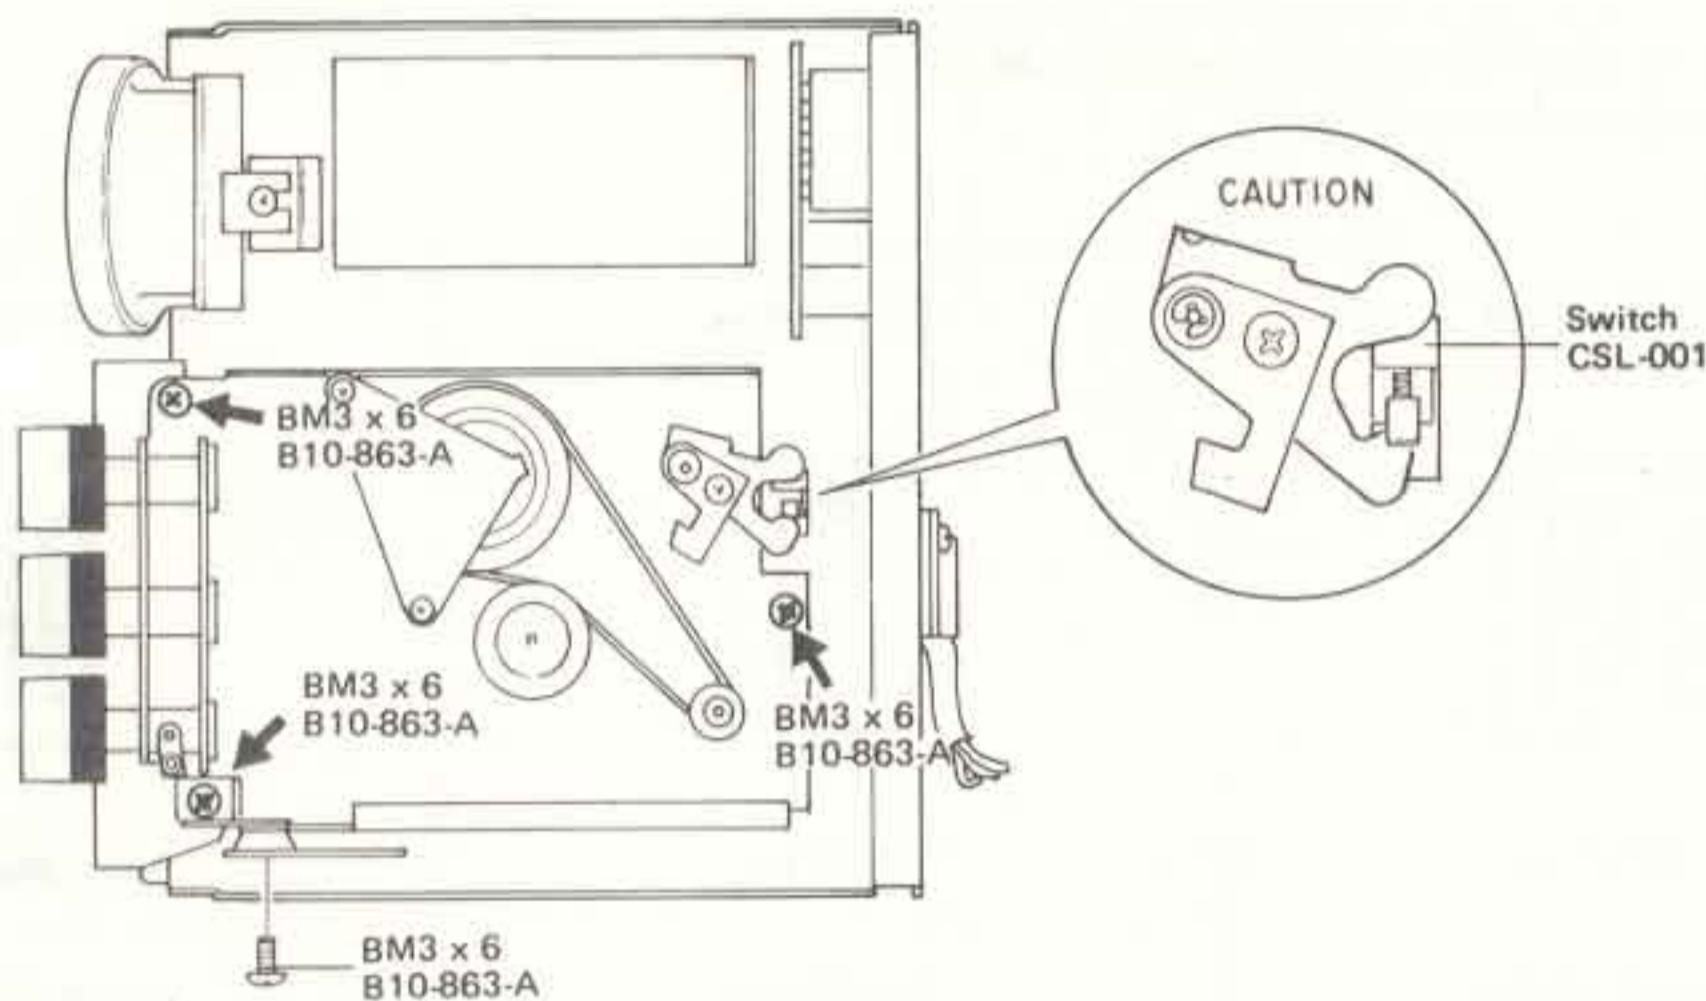

Fig. 8

4. ADJUSTMENT

4.1 TAPE SPEED ADJUSTMENT

Tape speed can be adjusted by replacing the motor pulley. Three types of pulleys differing in diameter are available as shown in the table below. The pulley surface has either one groove, two grooves or no groove to help distinguish the diameter (Fig. 9).

Diameter	Parts No.	No. of Grooves
9.22 mm	CXB-032	None
9.35 mm	CXB-033	One
9.47 mm	CXB-034	Two

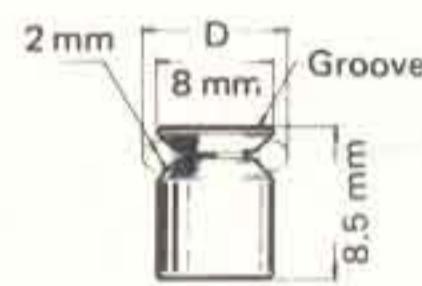

Fig. 9

4.2 AZIMUTH ADJUSTMENT

- Connection Diagram

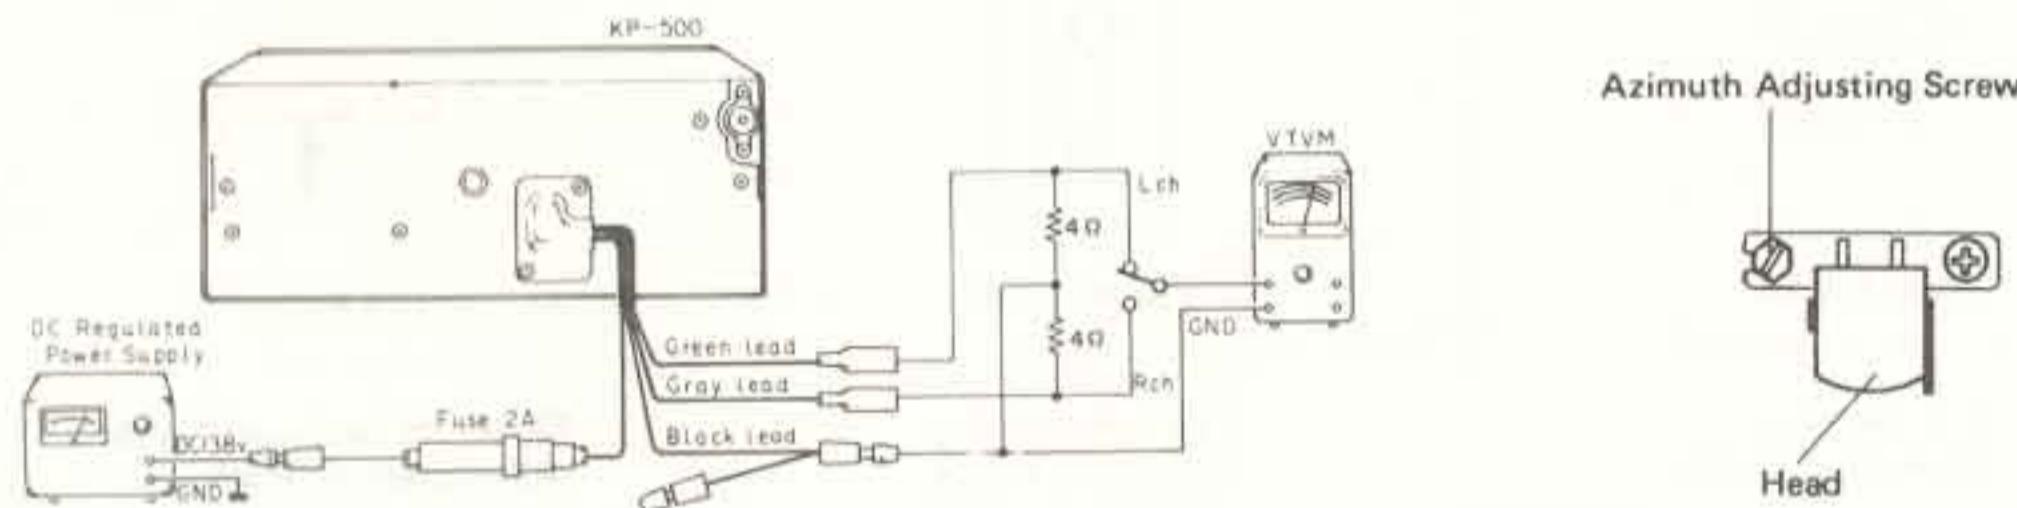

Fig. 10

- To Adjust

- Set bass, treble and balance to intermediate level and insert test tape CT-113 (6.3 kHz, -10 dBs) after adjusting volume to optional level.
- Turn the azimuth adjusting screw so that outputs of Lch and Rch are each at maximum symmetrically.

- Head Connection

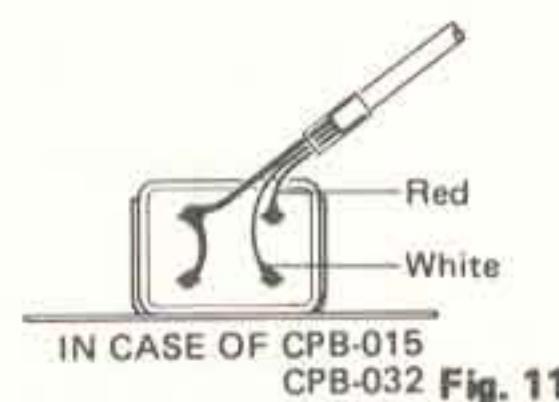

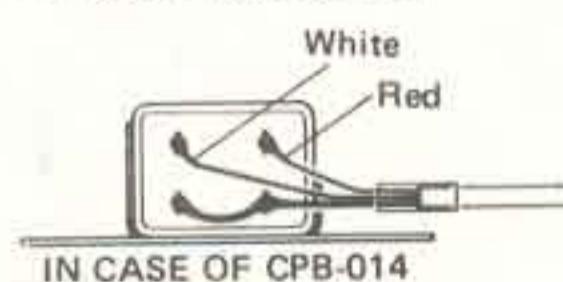

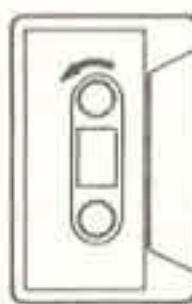

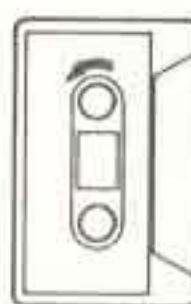

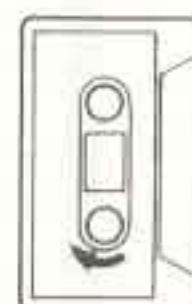

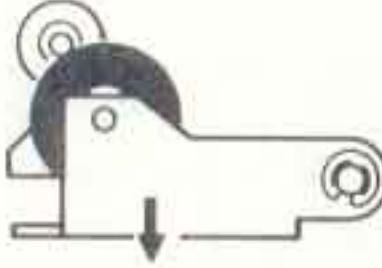

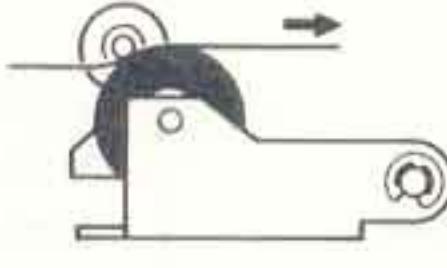

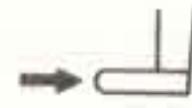

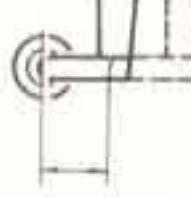

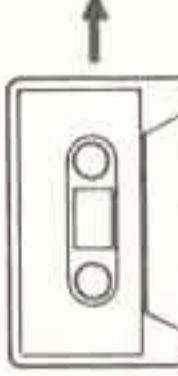

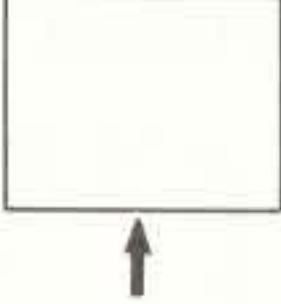

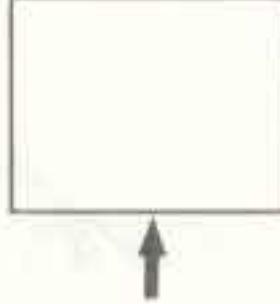

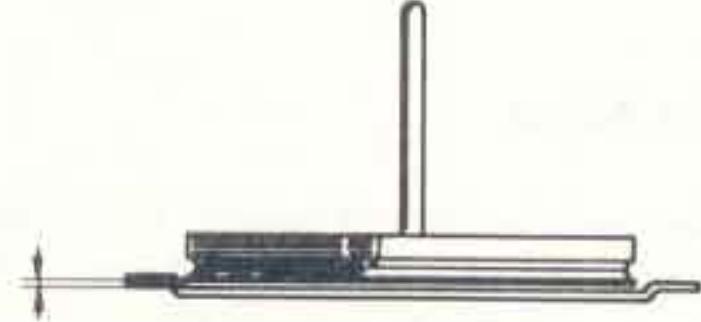

Fig. 11

ADJUSTMENT

4.3 CHECK POINTS OF CASSETTE MECHANISM

When replaced or repaired cassette mechanism parts,
refer to values in the following table.

Wind Torque	F.F. Torque	Rewind Torque
		
40~75 gcm	120±30 gcm	120 ± 30gcm
Pinch Roller Pressure	Tape Tensile Strength	Sensing Arm Working Force
		
400 ± 50g	More than 160g	40~60g
Sensing Arm Stroke	Cassette Loading Force	Eject Button Operating Force
		
0.4~1.8mm	Less than 3kg	Less than 1.5kg
F.F. Button Operating Force	Rewind Button Operating Force	Clearance between Flywheel and Flywheel Bracket
		
Less than 2.5kg	Less than 2.5kg	Less than 0.3mm

4.4 FM IF ADJUSTMENT

• Connection Diagram

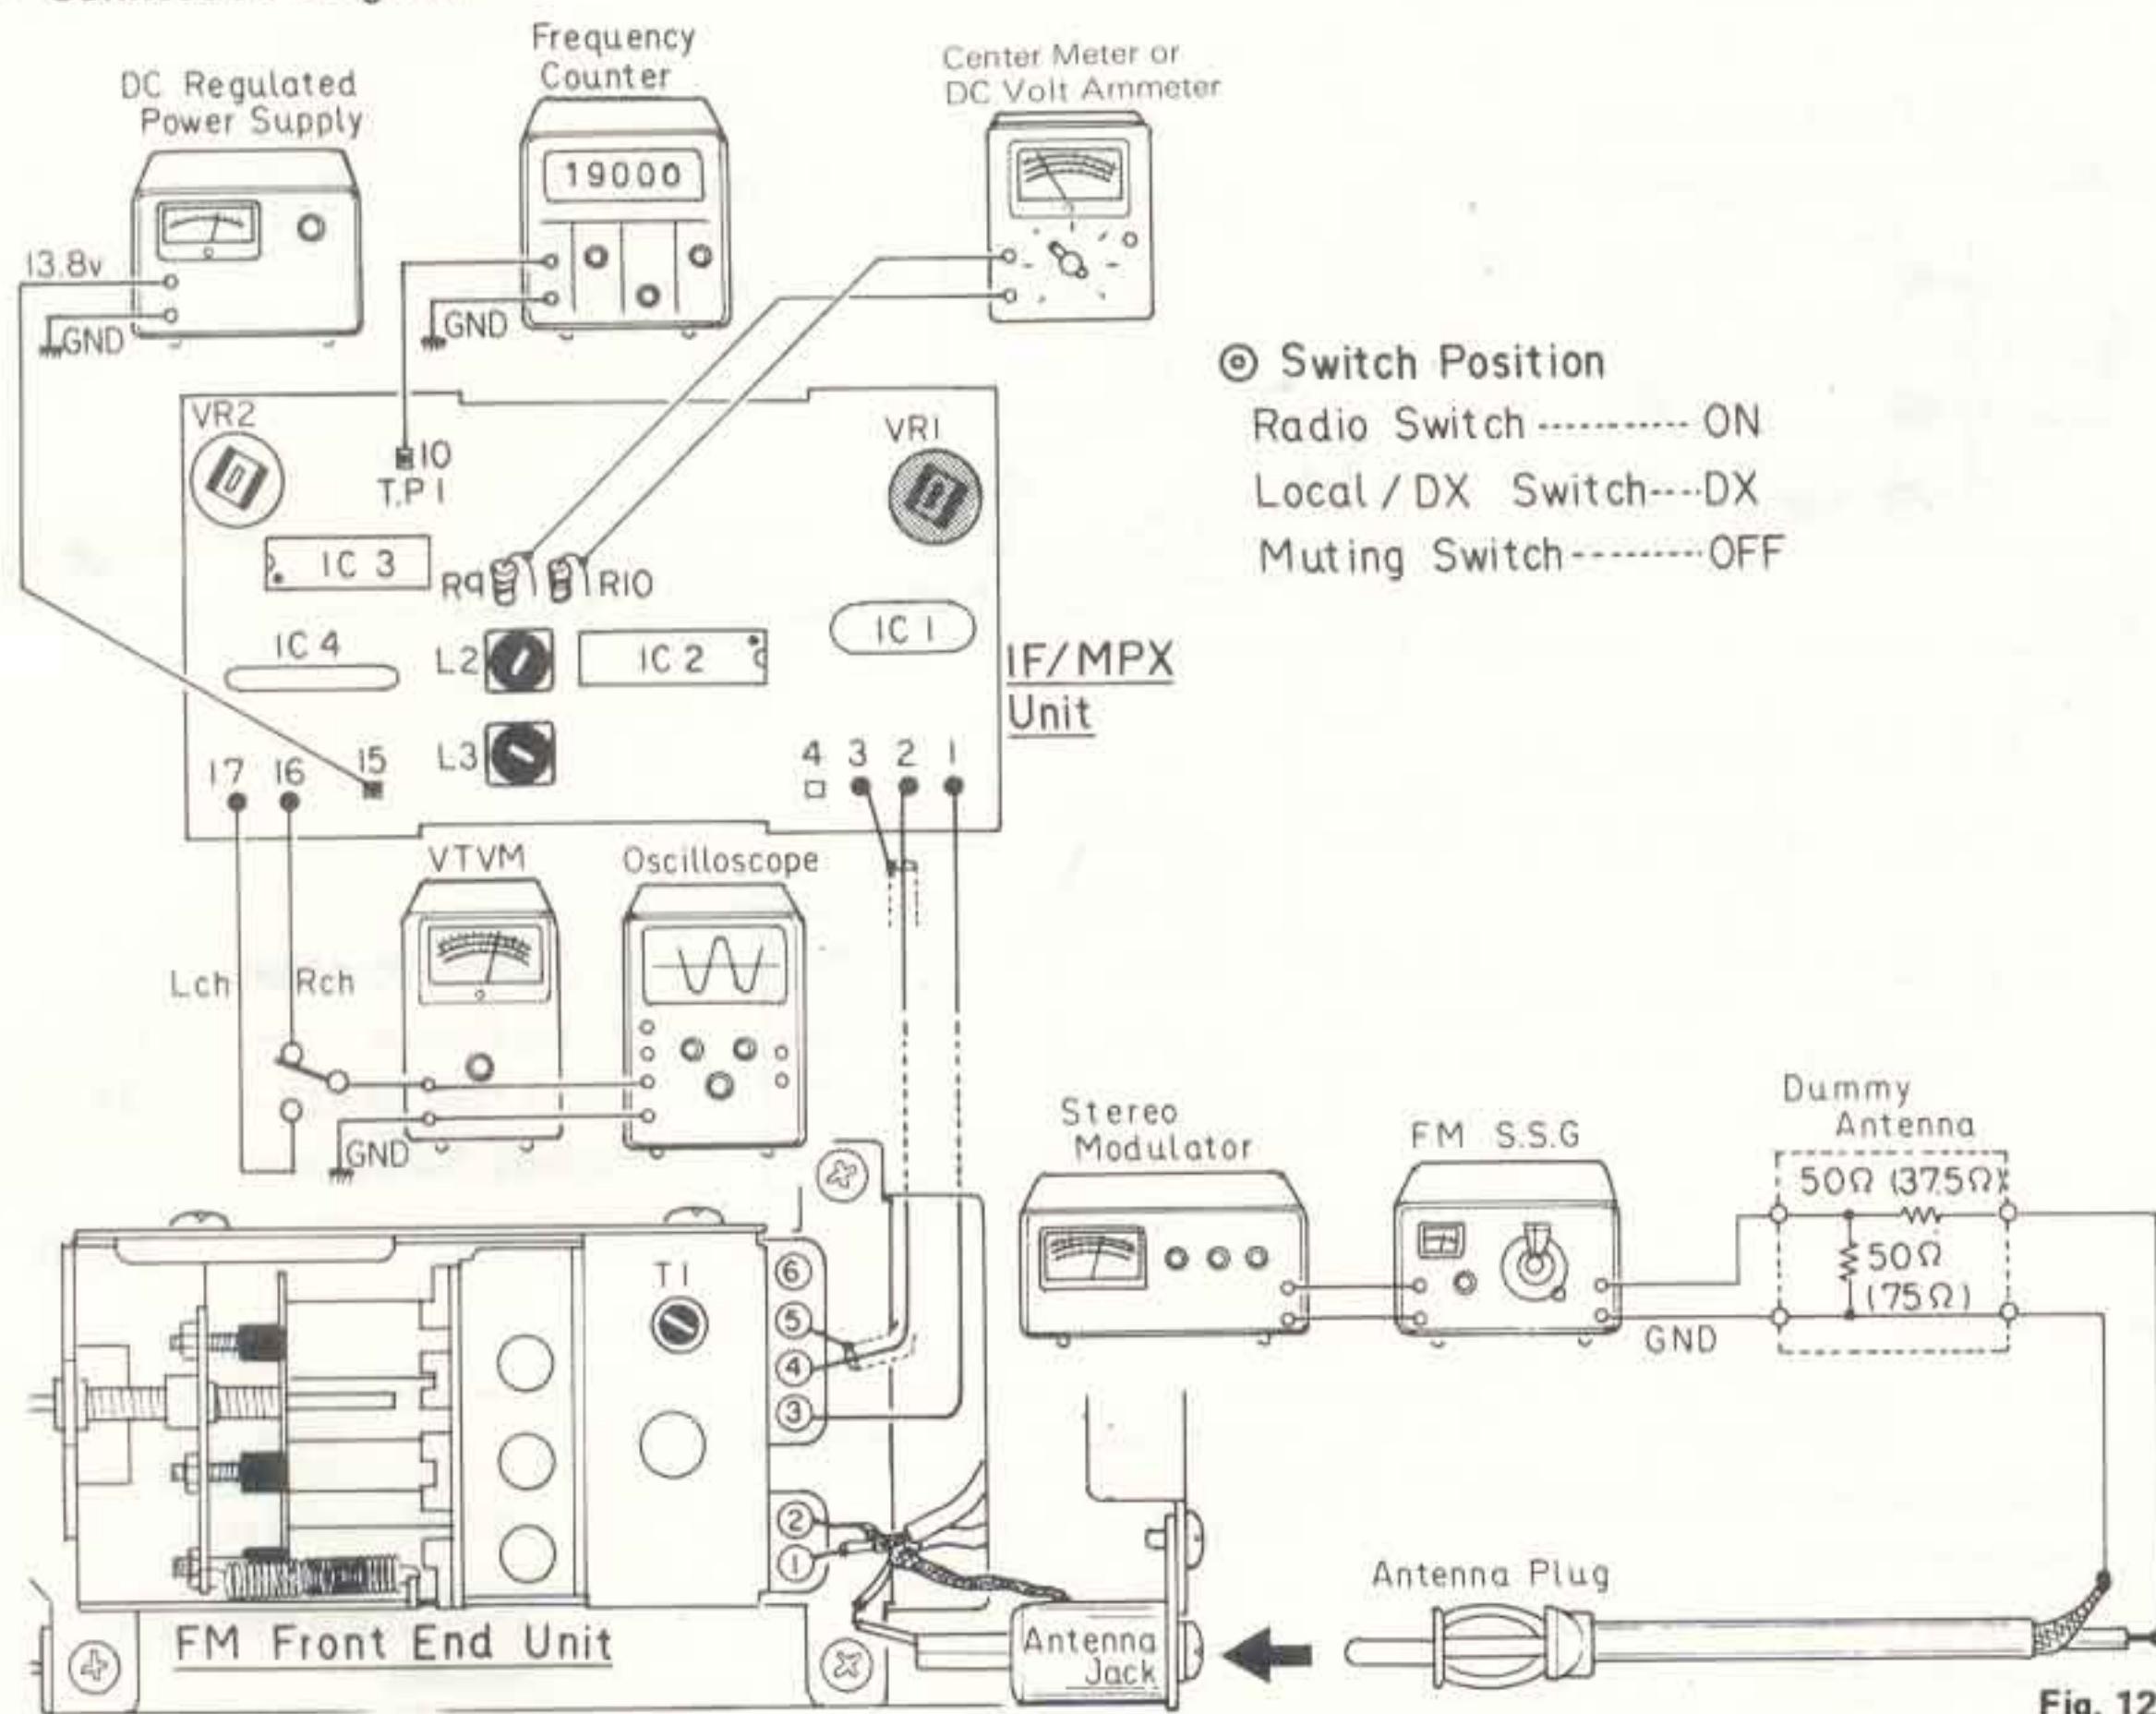

Fig. 12

• To Adjust

1. Add output signal of 0dB from SSG and adjust L3 (orange color) so that the pointer of center meter (use one graduated for over 200μA) will come to the center. When using a DC volt ammeter (use one graduated for over 200μA), set the pointer to 0.
2. Add output signal of 98MHz 60dB from SSG and tune to 98MHz on the dial (the pointer of the center meter is at the center).
3. Add output signal of 5dB from SSG and adjust T1 (front end) so that the output will become maximum.
4. Add output signal of 0dB from SSG, adjust L3 (orange color) so that the pointer of the center meter is at the center.

Note: When adjusting, do not move L2.

ADJUSTMENT

4.5 FM TRACKING ADJUSTMENT

- Connection Diagram

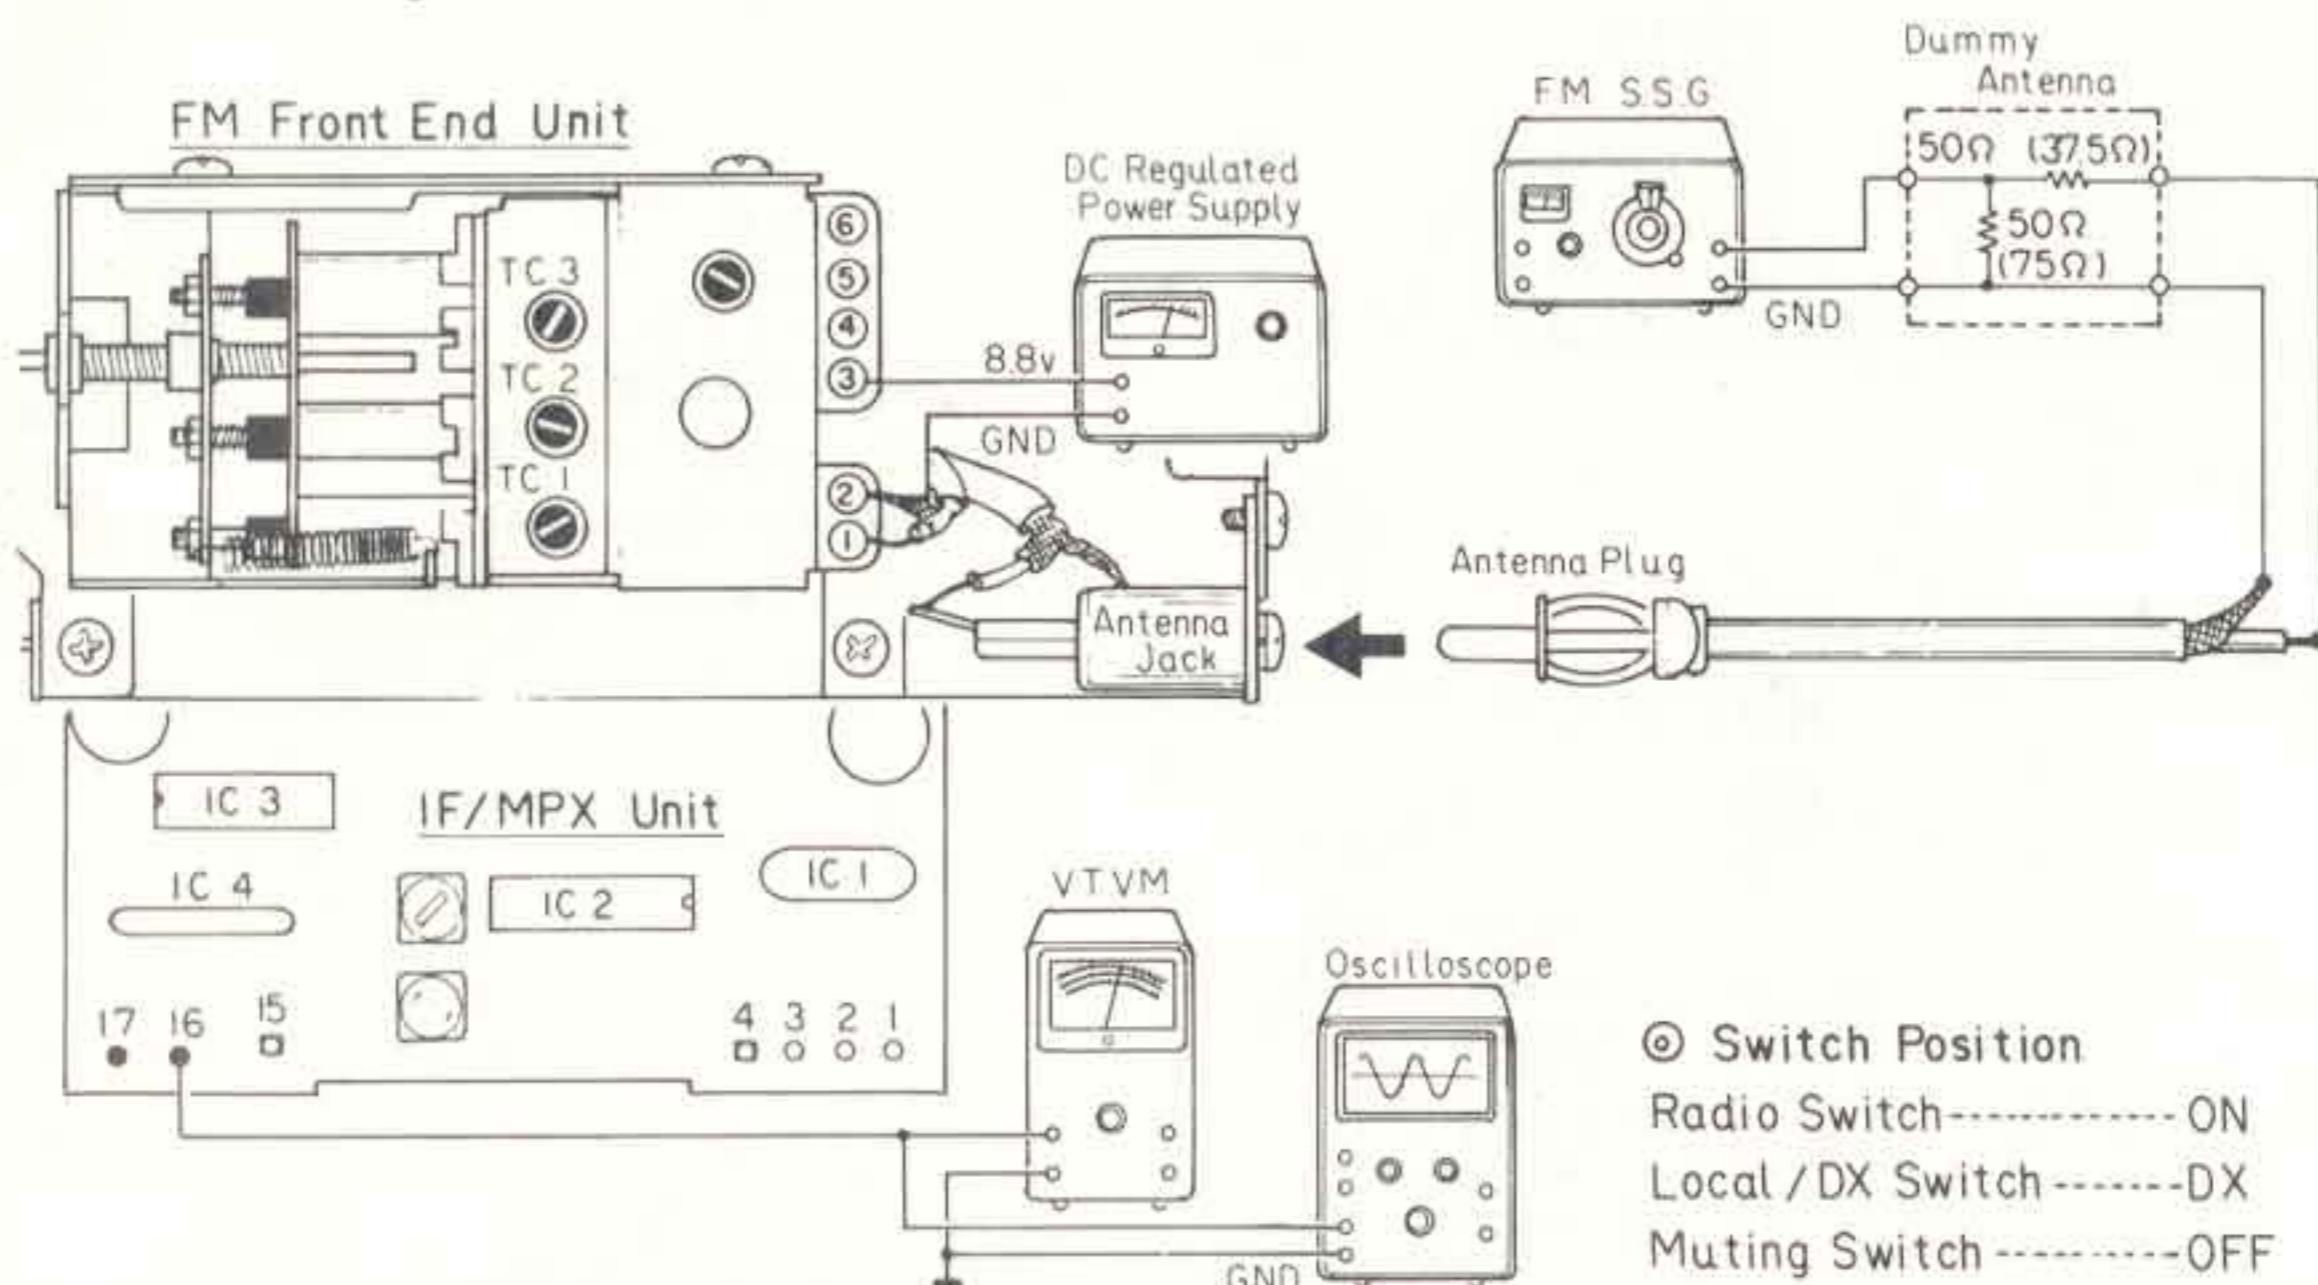

Fig. 13

- To Adjust

SSG frequency	Pointer Position	Adjustment Point	Note
1. 87 MHz (400 Hz, 100% modulation), output level 8dB	Minimum	TC3	87 MHz can be received
2. 109 MHz (400 Hz, 100% modulation), output level 8dB	Maximum		Check if 109 MHz can be received
3. 98 MHz (400 Hz, 100% modulation), output level 5 dB	Tuned position	TC1, TC2	Maximum output

4.6 STEREO LIGHTING LEVEL ADJUSTMENT

- Connection Diagram

Connect as shown in Fig. 12. Set the position of the switch as well.

- To Adjust

1. Add unmodulated signal of 60dB from SSG and adjust VR2 so that the frequency counter will indicate $19\text{kHz} \pm 20\text{Hz}$ (any tuning position will do).
2. Add 98MHz output 30dB from SSG and multi-signal of modulated frequency 1,000Hz of stereo modulator. Adjust VR1 so that the stereo indicator will light up. Slowly turn VR1 and set it at the position just before the stereo indicator will go out.
3. Gradually lower SSG output signal from 60dB and check if the stereo indicator is lighting at the range between 27 and 32dB.

5. DIAL STRINGING

11. MISCELLANEOUS PARTS LIST

KP-500

Ref. Key	Parts No.	Description			Notes
R1	RD1/10PS152J	Resistor	1.5kΩ	1/10W	
R2	RS1P181K	Resistor	180Ω	1W	
R3	RS1P181K	Resistor	180Ω	1W	
R4	RS1P220K	Resistor	22Ω	1W	
C1	CEA100P16	Capacitor	10μF	16V	
C2	CCL-045	Feed through Capacitor			
L1	CTF-003	Coil			15μH
IL1	CEL-001	Lamp, 5V 60mA			Tape Ind.
IL2	CEL-021	Lamp, 14V 60mA			Dial Ind.
IL3	CEL-021	Lamp, 14V 60mA			Dial Ind.
IL4	CEL-021	Lamp, 14V 60mA			Dial Ind.
IL5	CEL-001	Lamp, 5V 60mA			Stereo Ind.
HD	CPB-014 or	Head			
	CPB-015 or	Head			
	CPB-032	Head			
M	CXM-031 or	Motor			
	CXM-032	Motor			
ANT	CKX-001	Jack			Antenna
S2	CSL-005	Switch			Radio
S3	CSL-005	Switch			Local/distant
S4	CSL-005	Switch			Muting
S5	CSL-001	Switch			Tape/tuner Select
FU	E21-005	Fuse, 2A			

12. NOMENCLATURE OF SCREWS, WASHERS AND NUTS

The following symbols stand for screws, washers and nuts as shown in exploded view.

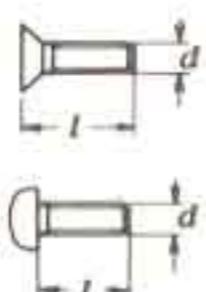

Symbol	Description	Shape
RT	Brazier head tapping screw	
PT	Pan head tapping screw	
BT	Binding head tapping screw	
CT	Countersunk head tapping screw	
TT	Truss head tapping screw	
OCT	Oval countersunk head tapping screw	
PM	Pan head machine screw	
CM	Countersunk head machine screw	
OCM	Oval countersunk head machine screw	
TM	Truss head machine screw	
BM	Binding head machine screw	
PSA	Pan head screw with spring lock washer	
PSB	Pan head screw with spring lock washer and flat washer	
PSF	Pan head screw with flat washer	

Symbol	Description	Shape
EW	E type washer	
FW	Flat washer	
SW	Spring lock washer	
N	Nut	
WN	Washer faced nut	
ITW	Internal toothed lock washer	
OTW	External toothed lock washer	
SC	Slotted set screw (Cone point)	
SF	Slotted set screw (Flat point)	
HS	Hexagon socket headless set screw	
OCW	Oval countersunk head wood screw	
CW	Countersunk head wood screw	
RW	Round head wood screw
